- AWS API Gateway
- AWS S3 Bucket
- AWS CloudWatch
- AWS EC2 (Elastic Compute Cloud)
- AWS CloudFront
- AWS RDS (Relational Database Service)
- AWS Identity and Access Management (IAM)

PROJECTS

Game Influencer

- Developed three key backend features: Whitelisting, Influencer Categorisation, and UGC Creator to enhance platform functionality.
- Implemented a Whitelisting to manage applications for campaigns, enabling efficient tracking and organization of influencer submissions.
- Automated the Influencer Categorisation process, enabling the platform to programmatically assign categories to influencers based on predefined criteria.

- Developed the backend for the UGC (User-Generated Content) Creator feature, enabling seamless handling and management of user-generated content for campaigns.
- Technology used: Express.js, MongoDB

Scrum master
- The scrum master system includes a user check-in-out module, timesheet management module, leave and work-from-home reports, a calendar for tracking user and request module for user submission of leave, work from home, changes in-out time, and missing days requests.
- Integrated with Slack app to provide users access to many functionalities directly within Slack.
- Created a Scrum Master administrative tool enabling admins to manage user profiles, track attendance, manage timesheets, handle user requests, and initiate and configure projects, specifying parameters and team members.
- Scheduled cron jobs using AWS EventBridge scheduler for automated tasks and notifications.
- Deployed backend on Amazon EC2, frontend on Amazon S3, and used Amazon RDS for the database.
- Technology used: NestJS, Postgresql

Amazon Seller App for App Store
- Developed backend services using NestJS and PostgreSQL to support an Amazon seller app for the App Store.
- Integrated Amazon Selling Partner API (SP-API) to retrieve product data directly from Amazon within the app.
- Utilized Oxolo open source API for creating product detail videos from the Amazon product data.
- Technology : NestJS, PostgreSQL

Google Business Manager Tool
- Developed a comprehensive tool to manage Google Business profiles .
- Integrated with Google APIs, including the Google My Business API, to retrieve and update business profile data.
- The Google Business Manager Tool streamlines the management of Google Business profiles with features for review, post, media, event, offer, and location management.
- It enables viewing, responding to, scheduling posts, organizing media, promoting events, managing offers, and handling multiple locations effortlessly.
- The Google Business Manager Tool includes seamless login functionality with Google accounts, ensuring secure and convenient access for users.
- Technology : NestJS, PostgreSQL
